

# DISNEYLAND PARIS - New Attraction

This project was for Toy Story Playland, a new themed area at Disneyland Paris. The campaign began from many technical drawings and designs which we then re-created from GRP to build 3D models which were painted to match the characteristics of the film. We also produced many signs around the theme park which were individually masked and painted, most of the 3D models were internally lit so they were visible at night and created the same magical effect for Disney.
